

# Restore & Preserve

## The Type of World We Want to Live in

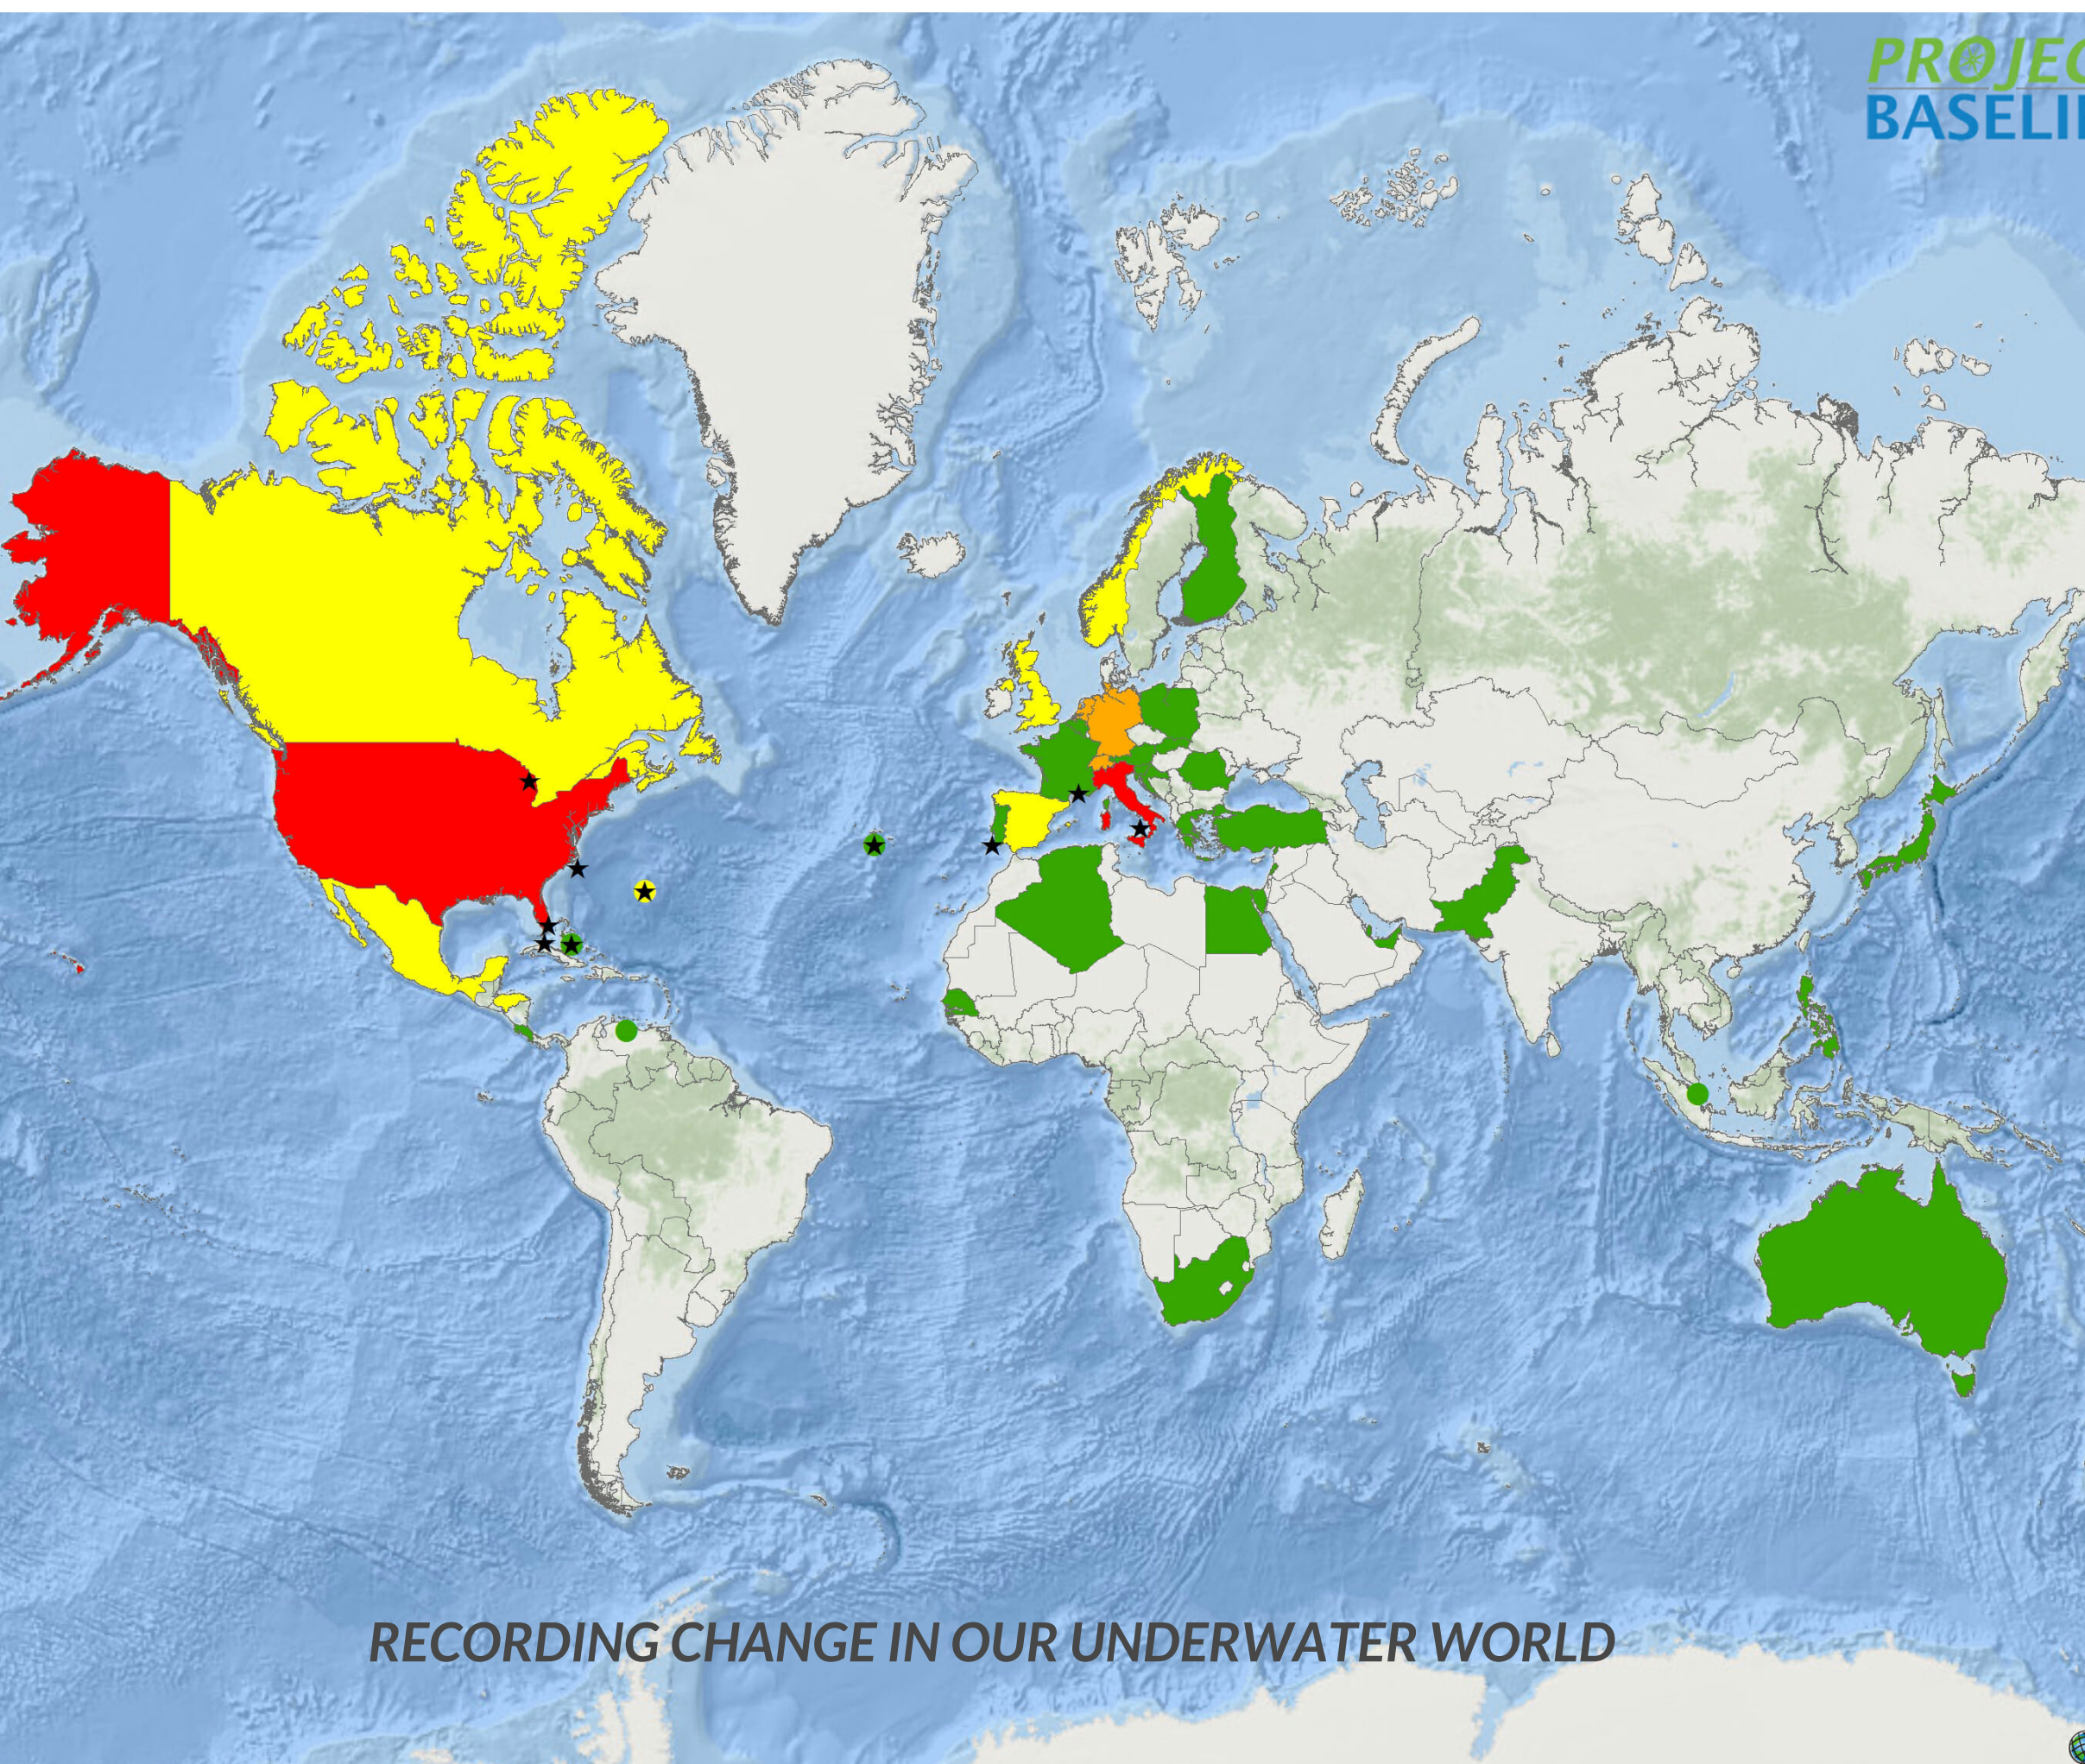

*Help us stop the decline of the underwater world - it doesn't have to be inevitable!*

# Our Mission

To mobilize citizen-divers to record change in the world's underwater environments and to engage with scientific, conservation, government entities to advance the restoration and protection of our natural and cultural treasures

# Every Generation

Has Let our Baseline for Acceptance  
Quality Shift Progressively Down

*It's time to stop the decline.*

*It's time to leave our world as good or better than the way we first experienced it.*

1995 vs 2012

# What We Are Doing

- Encouraging divers across the world
- Foster collaborations
- Conduct mission
- Provide a platform

# What You Can Do

- Become a member
- Record conditions at favorite dive spots
- Submit these to our database
- Find opportunities to get involved
- Engage the public

# Algae & Bacteria

Are Killing Marine Life & Fresh Water  
Ecosystems Everywhere

*Due to nutrient pollution from sewage and fertilizers.*

# No Protection=No Fish

Working to Establish Marine Protected Areas (MPAs)

*To bring fish back and increase populations.*

# Ghost Fishing & Plastics

A Century Old Killer Impacting the  
Marine Environment

A close-up, side-profile view of a diver's head and shoulders, looking down at a GoPro camera mounted on a metal frame. The diver is wearing a blue wetsuit. The background shows a sandy ocean floor with some small, dark, rectangular objects scattered across it. The water is a deep blue, and the lighting is dim, suggesting an underwater environment.

# Historical Heritage

## Submerged Wrecks & Antiquities

*Preserving stories hidden below the waves.*
